

The Decision Training Platform for AI

AI's next data frontier is here: Evolving from text and vision to true human-like decisioning

Teaching AI how humans think and act

Artifact converts real human behavior *into decision-grade signals that train AI systems to act, learn, and improve*

We start with gameplay - the densest observable environment for human choices and outcomes

Our ambition is to become the world's default infrastructure for training intelligent decision systems

World class team of gaming infra veterans and AI monetization experts

20+ years combined experience at Activision Blizzard King, Mistplay, and Freewheel – leading user monetization and liveops systems.

Sony Joseph
CEO

- Former VP Product and Head of Monetization @ Activision Blizzard King
- VP Data and Targeting Model at Comcast
- 20 years product experience @ Ripple, Freewheel (Comcast), and Mint(Intuit)

Adam Horwich
VP Product / Eng

- 15 years product experience
- Former VP AI & Ad Tech @ Mistplay
- 9 years @ Activision Blizzard King
- Build King's monetization platform from 0 -> 1

Why We'll Win

Unmatched gaming expertise developed at the **best gaming firms in the world**

2+ years of R&D building the reasoning data stack behind Artifact - now production-ready

Deep industry network across game studios and AI labs fueling a fast-growing pipeline

Positioned to scale immediately with publisher integrations and AI-lab evaluations underway

| Gameplay is quickly becoming the most prized data source for AI

General Intuition lands \$134M seed to teach agents spatial reasoning using video game clips

Why OpenAI Offered to Pay \$500 Million For A Startup With Videogame Data

By Stephanie Palazzolo

Source: [The Information](#) October 6, 2025

Gaming data is the next AI battleground

Gaming's behavioral data is rapidly becoming the most sought-after resource in AI. Game telemetry fuels next-gen AI agents for everything from logistics to finance. The battle for gaming data is on.

Source: [CoinTelegraph](#) Jun 08, 2025

Gameplay matters because it exposes complete decision loops — choices, feedback, and outcomes — at scale.

| Decision Training Is A New Infrastructure Layer In AI Spend

AI MODELS & AGENTS
(Decision-making systems acting across environments)

MODEL DEPLOYMENT & OPTIMIZATION
(Reliability; performance, Iteration)

EVALUATION & POST TRAINING LOOPS
(Continuous testing, iteration, improvement)

ARTIFACT

FOUNDATION MODEL TRAINING
(Pre-training, alignment, fine-tuning)

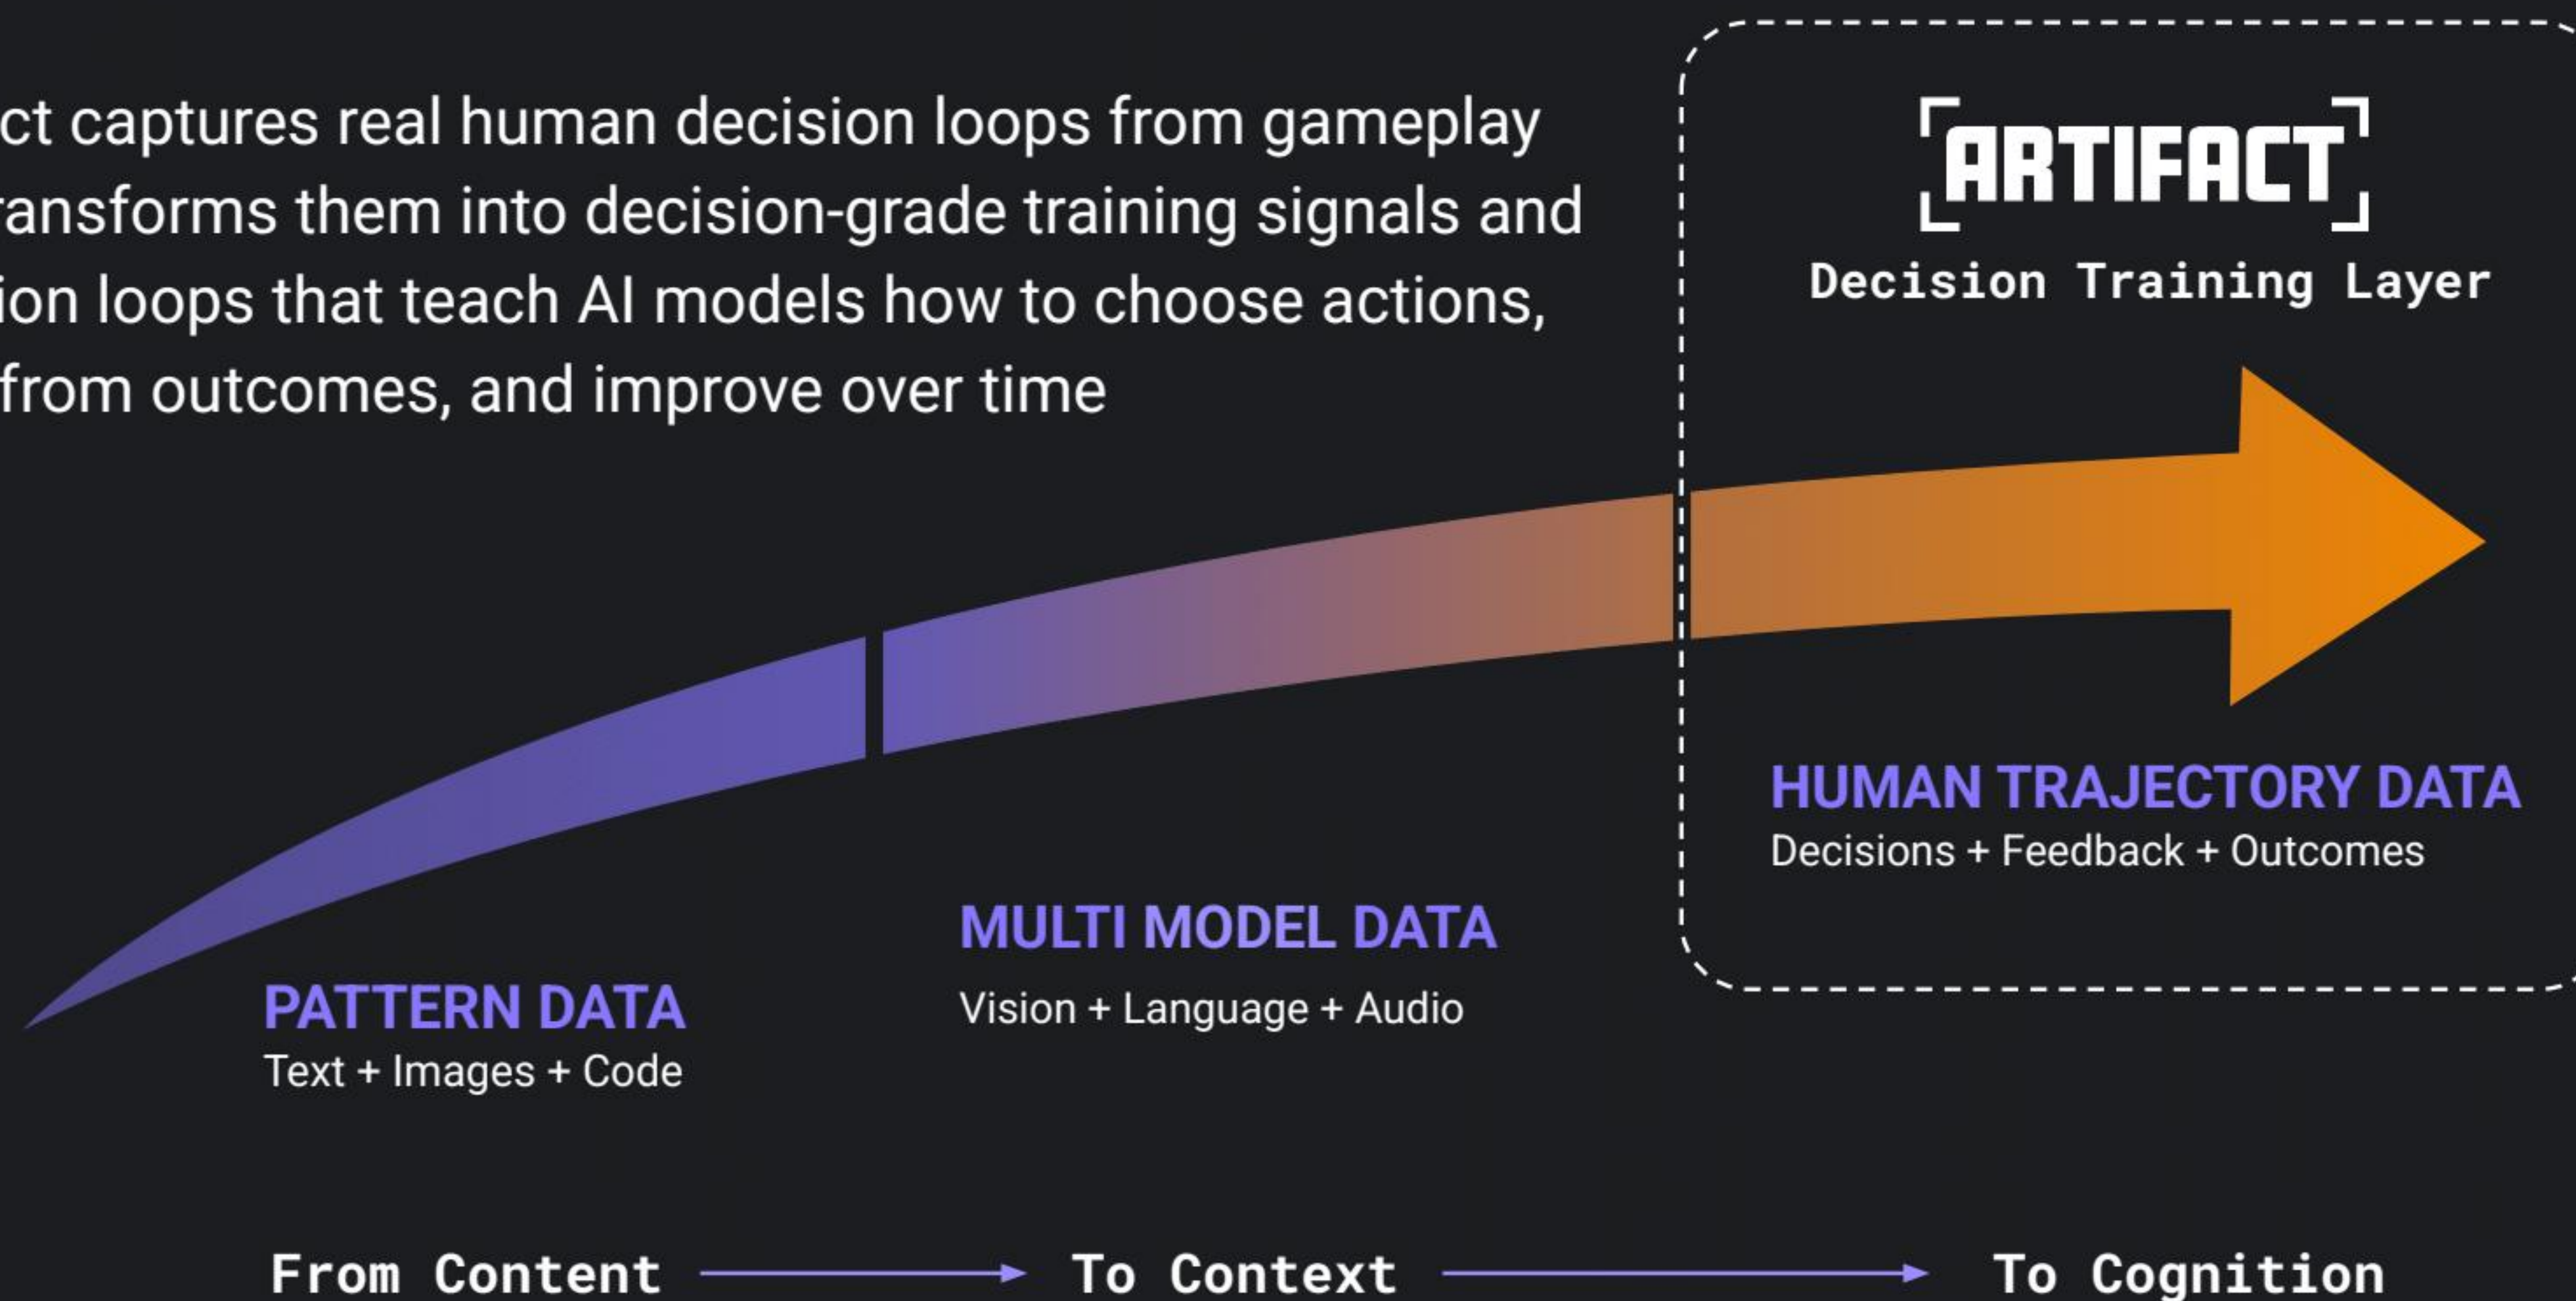

COMPUTE & CORE INFRASTRUCTURE
(GPUs, clusters, data pipelines)

A \$10B+ CATEGORY

- Models and agents require continuous decision training in production not one-time datasets
- Spend scales with models x agents x environments x iteration frequency
- Decision training becomes a recurring workload inside AI

Artifact is powering the next evolution of AI, starting with gameplay

Artifact captures real human decision loops from gameplay and transforms them into decision-grade training signals and decision loops that teach AI models how to choose actions, learn from outcomes, and improve over time

We turn human play into decisioning data. Every interaction teaches the model, and every model makes the app smarter

AGI Companies

Deliver

Artifact acts as the connective tissue between games and AI models

We've achieved defensibility through deep game integration and mutual value creation

Meet Spark, Artifact's AI Sidekick for Gamers

Spark and rewards are **built into the game**, enabling capture and annotation at the engine level

Stickier Users

Spark enables **more engaging and deeper play** inside the game

Deep Partnership with Publishers

Spark boosts session time and retention, enables data utilization, and aligns incentives with publishers.

Artifact's AI Workbench allows for Publishers to deploy and train their own reasoning agents.

| Artifact's Spark SDK ensures consistency and comparability of gameplay

Despite a wealth of video content accessible on the open internet today, much of it is unstructured or requires bespoke recruitment. Artifact brings a unique data advantage and offering in the space:

Equitably Sourced

We partner with developers and players to build sustainable sourcing, incentive, and monetization models across games.

Consistent

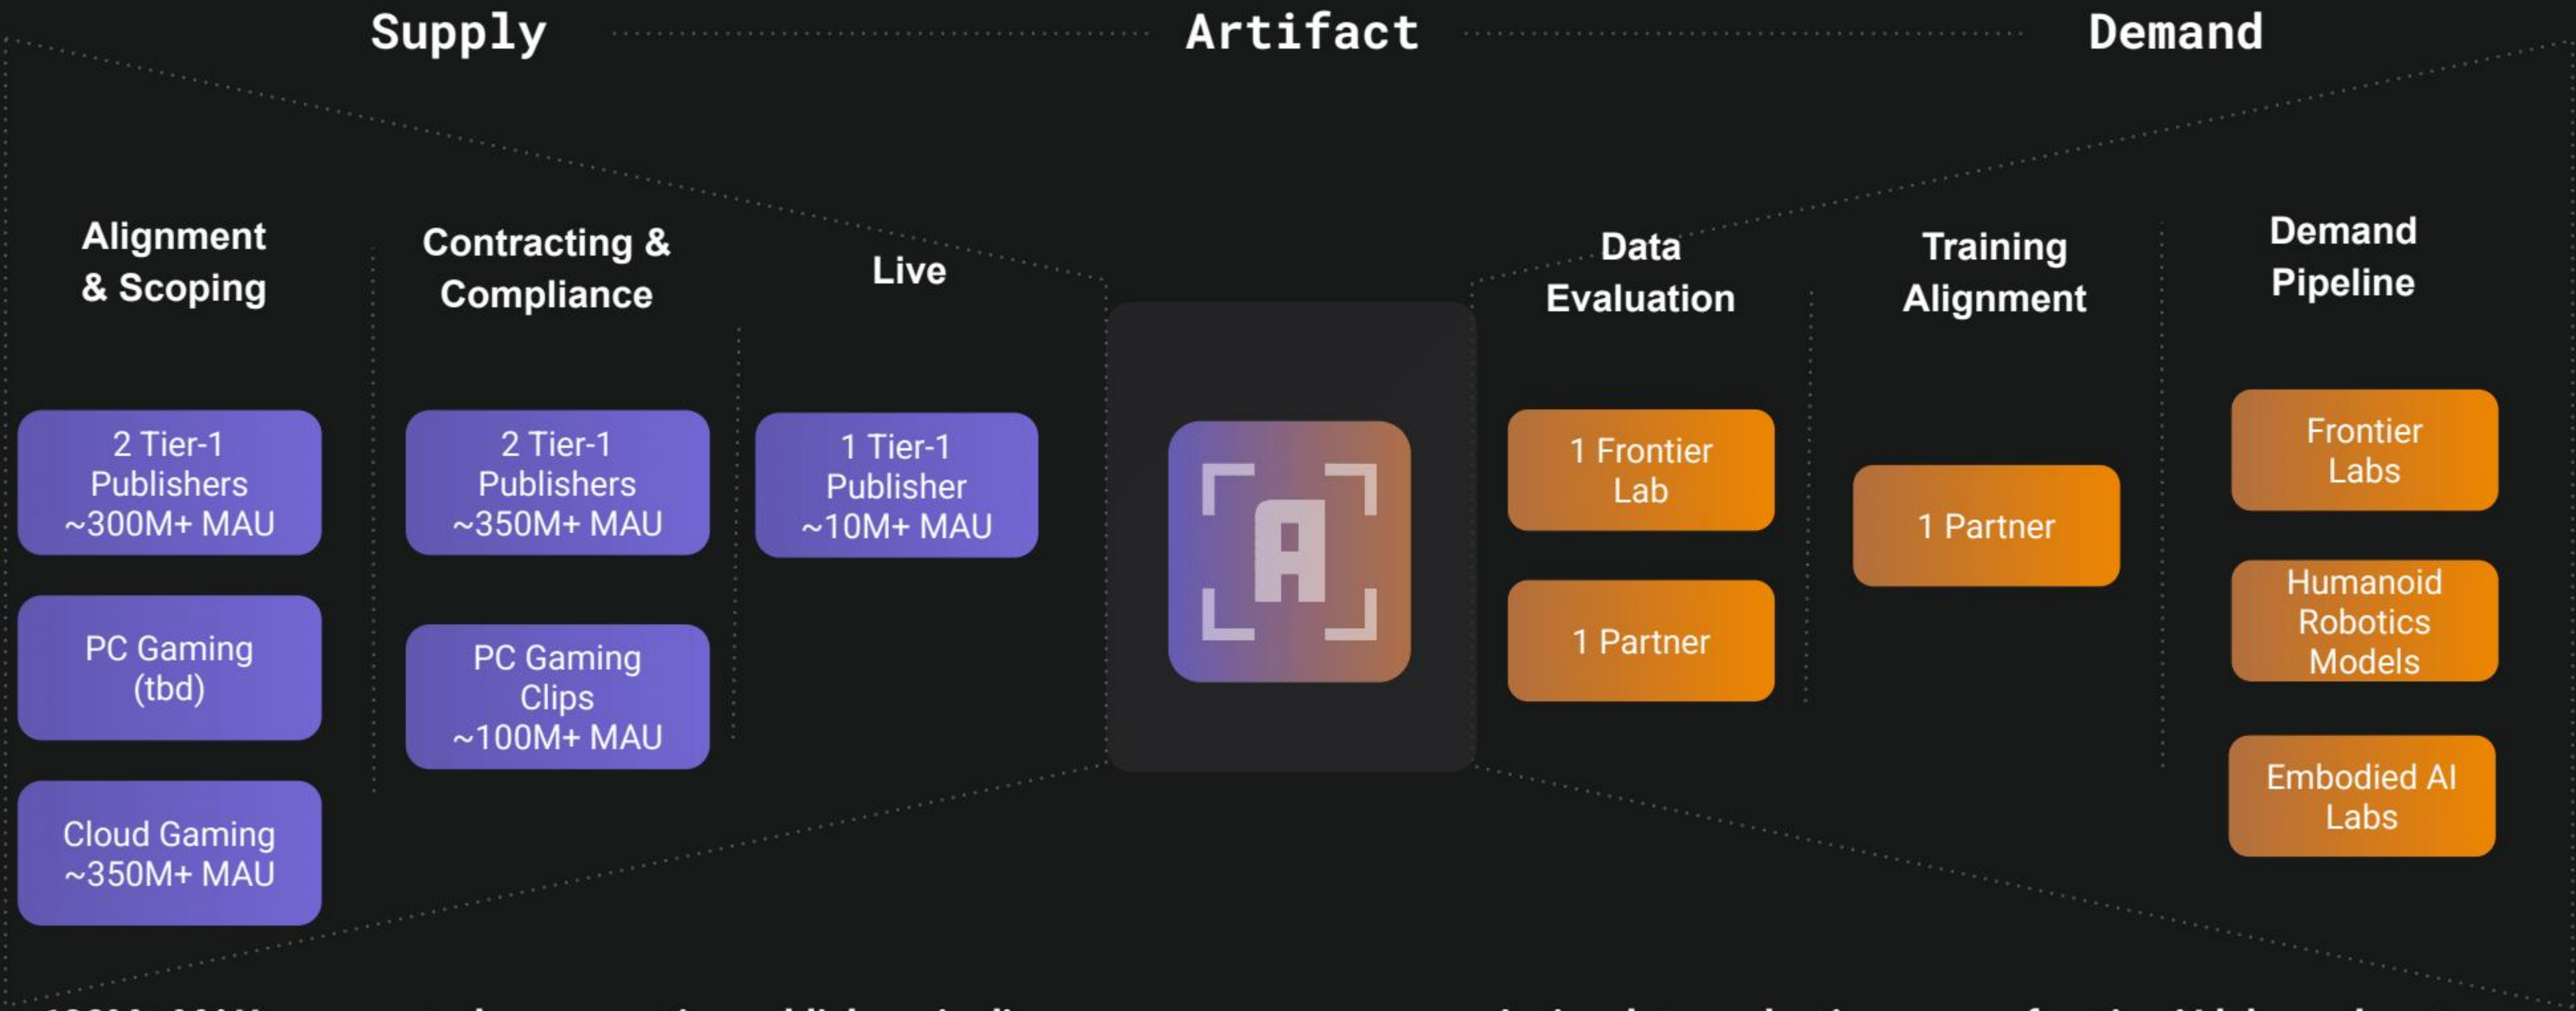

Developers use our SDK to capture only meaningful, consistent, and comparable gameplay moments.

Runtime Labeled

User actions are labeled at runtime, creating time-coded metadata that captures context and behavior.

Current momentum

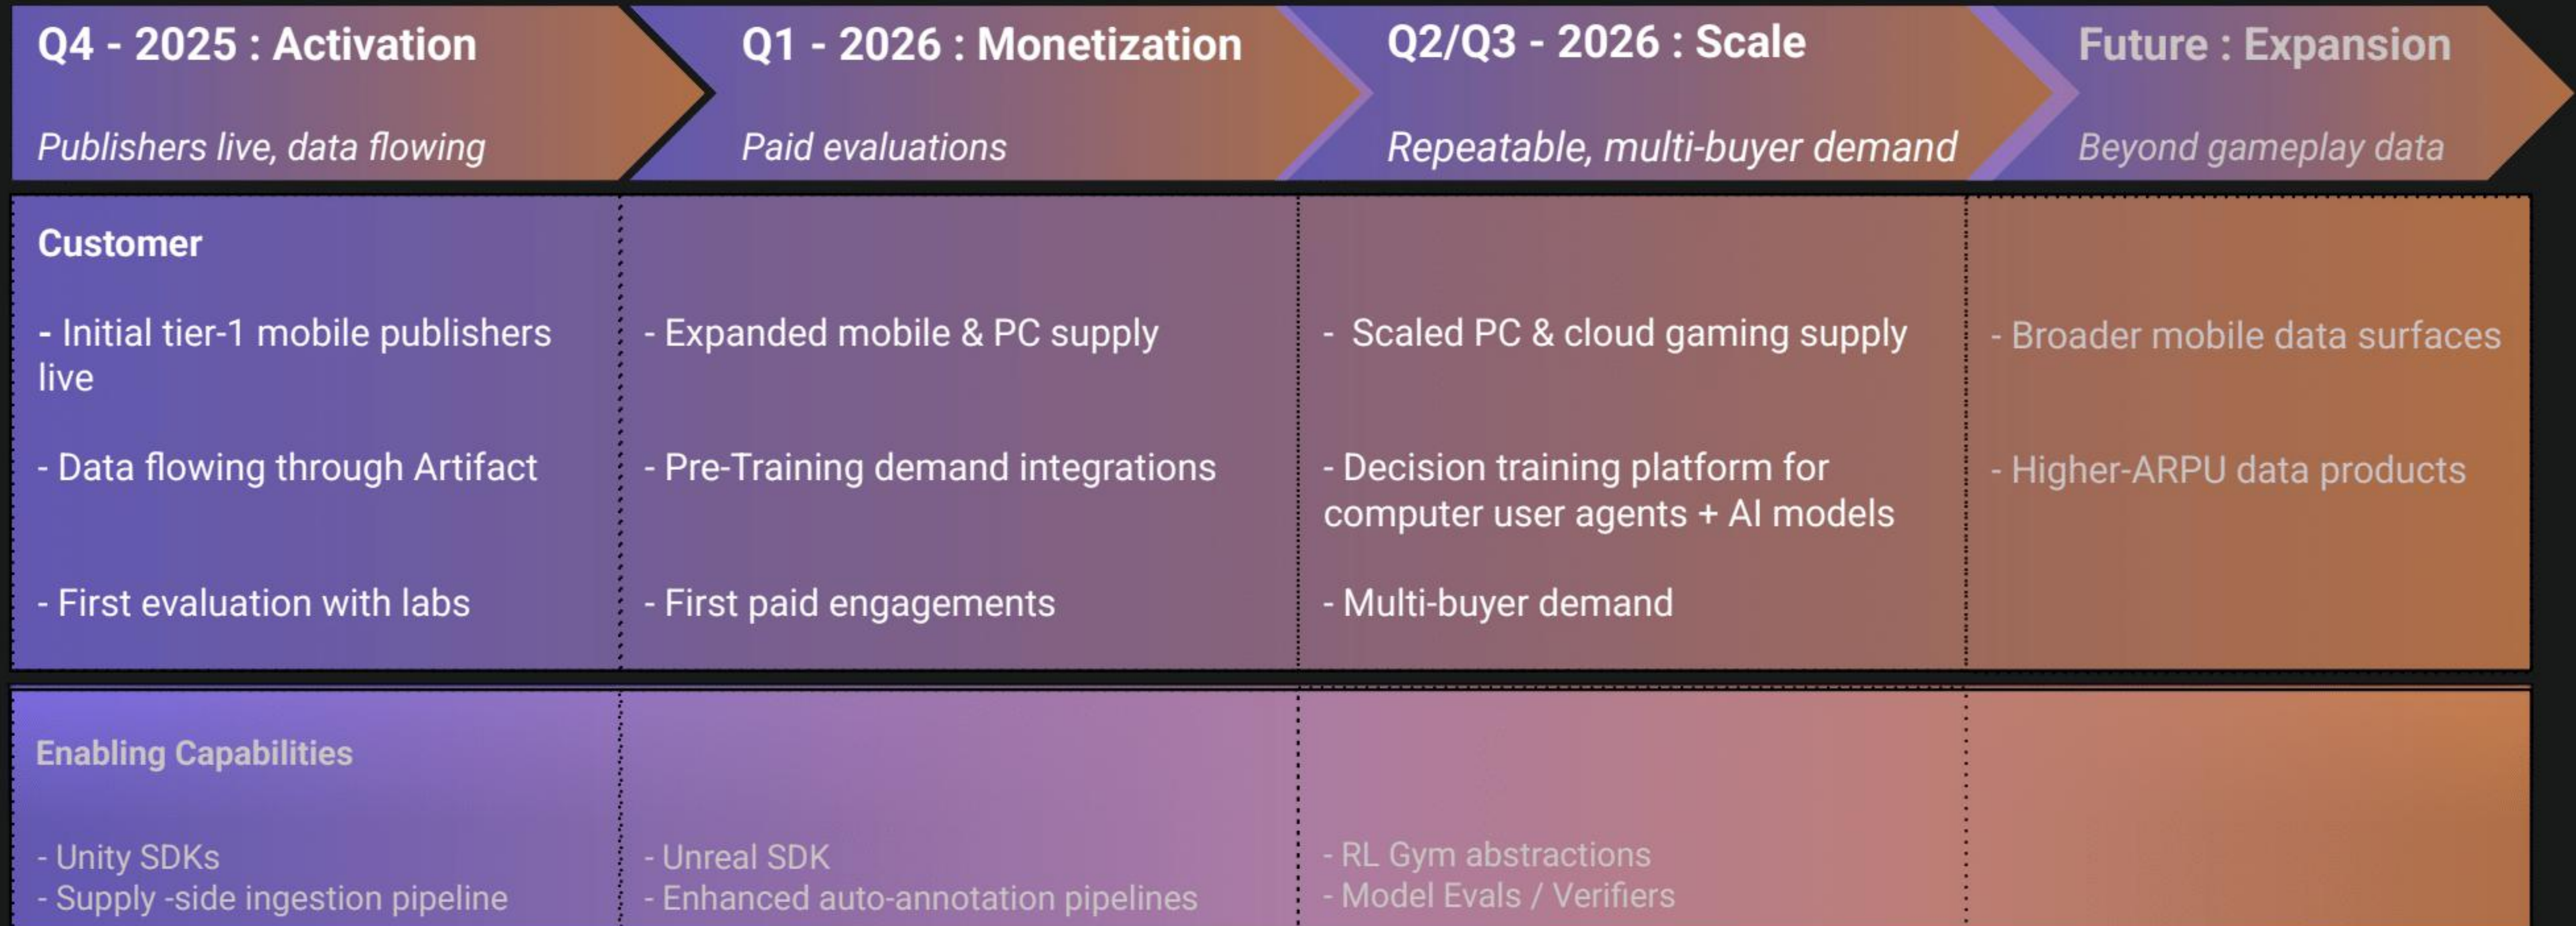

~600M+ MAU represented across active publisher pipeline

Active data evaluation across frontier AI labs and partners

Customer names withheld due to NDAs; disclosed during diligence

Roadmap - From Pipeline to Scale

The top row shows customer progress; the bottom row shows the capabilities that enable it.

| Revenue Engines That Compound as We Scale

Gameplay Monetization **Model Pre-Training**

- Revenue share (20%) from decision-grade gameplay signals used for foundation and policy pre-training.
- Each new publisher expands the global human decision graph, increasing coverage and model value.

Decision Training Platform **Model Post-Training + Agents**

- Recurring SaaS revenue from continuous evaluation, fine-tuning, and decision training for AI models and computer-use agents.
- Labs integrate Artifact directly into their post-training and iteration loop

We enter through paid evaluations and expand into recurring post-training integration

Raising \$5M to scale the leading decision-training infrastructure for AI systems

- Reach \$10M ARR in 2026 driven by lab contracts + publisher expansion
- Scale to 3–4 foundation labs in production
- Extend product into the model post-training pipeline

Backed by leading investors

RAPTOR DIGITAL

BLIZZARD
AVALANCHE ECOSYSTEM FUND

Appendix

Optional Incremental Revenue Layer: Player AI Micro-Tasks

- Pure incremental revenue - no cannibalization of IAP/ads
- Zero integration cost - instantly scalable across our live publisher network
- Millions of daily game sessions become task-distribution surfaces

The future - Decentralized Reasoning Network

| Value of Mobile Gameplay Data by Genre

Game Genre	Target World Models	Data Value & Why	Mobile Game examples
Hyper-Casual Games	Dynamics Model (Latent-Space Dynamics Models)	Low-Noise Causality: Simple mechanics (tap, swipe) provide the cleanest possible between action and state logs . Ideal for training model stability and efficiency.	Tangle Master 3D, Fill The Fridge! / Voodoo / Ketchapp
Casual Puzzle Games	Reward/Critic Model (Latent-Space Dynamics Models)	Difficulty and Planning: Data logs player attempts, failure points, and time-to-solve. Crucial for training the model to assign value to intermediate states and procedurally generate balanced, solvable content.	Candy Crush / Puzzle Portfolio
High-Fidelity RPG/Open World	Representation Model (Generative World Models)	Aesthetic Diversity and Consistency: High-resolution texture data, detailed 3D geometry, and consistent artistic style are required to train the GWM's Generative Decoder for asset creation and seamless video.	Genshin Impact / Clash of Clans
Competitive FPS/MOBA	Multi-Agent Dynamics (Foundation / Large World Models)	Strategic Interaction & Traversal: Logs complex multi-agent movement, choke-point usage, and real-time decision-making. Essential for modeling unpredictable opponent behavior and real-world multi-agent scenarios.	PUBG Mobile / Moonton: Mobile Legends / Words With Friends
Social/Simulation Games	Economic/Reward Models	Long-Term Utility: Tracks player resource generation/consumption and retention over months/years. Essential for training models to predict and optimize long-term economic stability and human engagement.	FarmVille / Scopely

Recent funding of AI data companies

Company	What they sell	Latest known raise (date)	Latest valuation
General Intuition	World model using gameplay data	\$134M (Oct 2025)	"> \$1B" Led by Khosla Ventures and GC
Mercor	AI-powered talent for model training	Series C \$350 M (Feb 2025)	~\$10B valuation
Surge AI	Expert labeling network	In talks to raise up to \$1B (Jul 2025)	Targeting >\$15B (reported,)
Scale AI	Enterprise labeling, model evals	\$1B round (May 2024) + Meta deal taking 49% (Jun 2025)	~\$29B post with Meta stake (reported)
Surge AI	Expert labeling network	In talks to raise up to \$1B (Jul 2025)	Targeting >\$15B (reported,)
Invisible	Managed workforce for data ops & labeling	\$100M growth round (Sep 2025)	"> \$2B" post (reported)
Snorkel AI	Programmatic labeling & DaaS	Series D \$100M (May 2025)	~\$1.3B post (reported)
Super Annotate	Annotation platform + managed labeling	Series B \$36M (Nov 2024)	N/D (not disclosed)
Labelbox	Data labeling platform + expert services	Total raised ~\$189M	"> \$1B" (reported)
Toloka	Crowdsourcing/managed datasets for AI	\$72M (May 2025)	N/D (not disclosed)
